

## **COS Assignment 2**

**Mansi Mahadev Kamble**

### **Part A**

**Q.What will the following commands do?**

**1.echo "Hello, World!"**

Prints "Hello, World!" to the terminal.

**2.name="Productive"**

Assigns "Productive" to the variable name.

**3.touch file.txt**

Creates an empty file named file.txt or updates its timestamp if it exists .

**4.ls -a**

Lists all files and directories, including hidden ones those starting with .

**5.rm file.txt**

Deletes file.txt permanently.

**6.cp file1.txt file2.txt**

Copies file1.txt to file2.txt

**7.mv file.txt /path/to/directory/**

Moves file.txt to the specified directory.

**8.chmod 755 script.sh**

Grants the owner full permissions (read, write, execute) and gives others read and execute permissions on script.sh.

**9.grep "pattern" file.txt**

Searches for "pattern" in file.txt and displays matching lines.

**10.kill PID**

Terminates the process with the given process ID (PID).

**11.mkdir mydir && cd mydir && touch file.txt && echo "Hello, World!" > file.txt && cat file.txt**

Creates mydir, moves into it, creates file.txt, writes "Hello, World!" to it, and displays its contents.

**12.ls -l | grep ".txt"**

Lists files in long format and filters entries containing .txt.

**13.cat file1.txt file2.txt | sort | uniq**

Merges file1.txt and file2.txt, sorts the lines, and removes duplicates

**14.ls -l | grep "^d"**

Lists only directories in long format , ^d filters lines starting with d, indicating directories.

**15.grep -r "pattern" /path/to/directory/**

Recursively searches for "pattern" in all files under the specified directory.

**16.cat file1.txt file2.txt | sort | uniq -d**

Displays only duplicate lines found in file1.txt and file2.txt after sorting.

**17.chmod 644 file.txt**

Grants the owner read and write permissions, while others get read-only access to file.txt.

**18.cp -r source\_directory destination\_directory**

Recursively copies source\_directory and its contents to destination\_directory.

**19.chmod u+x file.txt**

Grants execute permission to the file owner.

**20.echo \$PAT**

Displays the value of the environment variable PAT (if set). Otherwise, it prints an empty line.

**21.find /path/to/search -name "\*.txt"**

Searches for all .txt files within the specified path.

## **Part B**

### **Q.Identify True or False**

1.ls is used to list files and directories in a directory.

True – ls is used to list files and directories in a directory.

2.mv is used to move files and directories.

True – mv is used to move files and directories.

3.cd is used to copy files and directories.

False – cd is used to change the directory, not copy files. (cp is used for copying files and directories.)

4.pwd stands for "print working directory" and displays the current directory.

True – pwd stands for "print working directory" and displays the current directory.

5.grep is used to search for patterns in files.

True – grep is used to search for patterns in files.

6.chmod 755 file.txt gives read, write, and execute permissions to the owner, and read and execute permissions to group and others.

True – chmod 755 file.txt gives: Owner: read (r), write (w), execute (x)

Group: read (r), execute (x)

Others: read (r), execute (x)

7. `mkdir -p directory1/directory2` creates nested directories, creating `directory2` inside `directory1` if `directory1` does not exist.

True – `mkdir -p directory1/directory2` creates `directory1` first (if it doesn't exist), then `directory2` inside it.

8. `rm -rf file.txt` deletes a file forcefully without confirmation.

True – `rm -rf file.txt` forcefully removes the file without confirmation (`-r` is for recursive removal, and `-f` is for force).

### **Q. Identify the Incorrect Commands:**

1. `chmodx` is used to change file permissions.

Incorrect – `chmodx` does not exist. The correct command is `chmod`.

2. `cpy` is used to copy files and directories.

Incorrect – `cpy` does not exist. The correct command is `cp`.

3. `mkfile` is used to create a new file.

Incorrect – `mkfile` is not a standard Linux command. To create a file, use `touch filename` or `echo "" > filename`.

4. `catx` is used to concatenate files.

Incorrect – `catx` does not exist. The correct command for concatenation is `cat`.

5. `rn` is used to rename Files.

Incorrect – `rn` does not exist. The correct command to rename files is `mv`.

## Part C

**Question 1: Write a shell script that prints "Hello, World!" to the terminal.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# touch CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
echo "Hello, World!"
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
Hello, World!
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 2: Declare a variable named "name" and assign the value "CDAC Mumbai"  
Print the value of variable**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# ls
CO Hello Helloclear
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
name="CDAC Mumbai"
echo $name

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
CDAC Mumbai
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 3: Write a shell script that takes a number as input from the user and prints it.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# ls
CO Hello Helloclear
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# /
-bash: /: Is a directory
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
echo "Enter number"
read number
echo You Entered $number

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
Enter number
13
You Entered 13
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 4: Write a shell script that performs addition of two numbers (e.g., 5 and 3) and prints the result.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
num1=5
num2=3
sum=$((num1 + num2))
echo The sum of number is $sum
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
The sum of number is 8
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 5: Write a shell script that takes a number as input and prints "Even" if it is even, otherwise prints "Odd".**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano C0
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat C0
echo Enter a number
read number
if(( number%2==0 ))
then
    echo Entered number is even
else
    echo Entered number is odd
fi
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
Enter a number
4
Entered number is even
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
Enter a number
5
Entered number is odd
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 6: Write a shell script that uses a for loop to print numbers from 1 to 5.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano C0
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat C0
for i in {1..5};
do
    echo $i
done
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
1
2
3
4
5
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 7: Write a shell script that uses a while loop to print numbers from 1 to 5.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
i=1
while [ $i -le 5 ];
do
    echo $i
    ((i++))
done

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
1
2
3
4
5
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 8: Write a shell script that checks if a file named "file.txt" exists in the current directory. If it does, print "File exists", otherwise, print "File does not exist".**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
if [ -f "file.txt" ];
then
    echo File exists
else
    echo File does not exist
fi

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
File does not exist
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat CO
if [ -f "hello.txt" ];
then
    echo File exists
else
    echo File does not exist
fi

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
File does not exist
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano CO
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash CO
File exists
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 9: Write a shell script that uses the if statement to check if a number is greater than 10 and prints a message accordingly.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano C0
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat C0
echo Enter a number
read num
if ((num > 10))
then
    echo The number is greater than 10
else
    echo The number is not greater than 10
fi

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
Enter a number
13
The number is greater than 10
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 10: Write a shell script that uses nested for loops to print a multiplication table for numbers from 1 to 5. The output should be formatted nicely, with each row representing a number and each column representing the multiplication result for that number**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano C0
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat C0
for i in {1..10}
do
    for j in {1..5}
    do
        printf "%4d" $((i * j))
    done
    echo
done

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
 1   2   3   4   5
 2   4   6   8  10
 3   6   9  12  15
 4   8  12  16  20
 5  10  15  20  25
 6  12  18  24  30
 7  14  21  28  35
 8  16  24  32  40
 9  18  27  36  45
10  20  30  40  50
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

**Question 11: Write a shell script that uses a while loop to read numbers from the user until the user enters A negative number. For each positive number entered, print its square. Use the break statement to exit the Loop when a negative number is entered.**

```
Ubuntu
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# nano C0
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# cat C0
while true
do
echo Enter a num
read num
if ((num < 0))
then
    echo Exiting the loop...
    break
fi

    square=$((num * num))
    echo Square of $num is: $square
done

root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2# bash C0
Enter a num
13
Square of 13 is: 169
Enter a num
4
Square of 4 is: 16
Enter a num
-4
Exiting the loop...
root@DESKTOP-2PN8KP1:~/LinuxAssignment/docs/Assignment2#
```

## Part E

1. Consider the following processes with arrival times and burst times:

| Process | Arrival Time | Burst Time |

|-----|-----|-----|

| P1 | 0 | 5 |

| P2 | 1 | 3 |

| P3 | 2 | 6 |

Calculate the average waiting time using First-Come, First-Served (FCFS) scheduling.

1) According to FCFS scheduling Algorithm

Process	Arrival Time	Burst Time	Waiting Time
P <sub>1</sub>	0	5	0
P <sub>2</sub>	1	3	4
P <sub>3</sub>	2	6	6

Gantt chart -

P<sub>1</sub>                  P<sub>2</sub>                  P<sub>3</sub>  
0                  5                  8                  14

$$\therefore \text{Average Waiting Time} = \frac{10}{3} \\ = 3.33$$

2. Consider the following processes with arrival times and burst times:

| Process | Arrival Time | Burst Time |

|-----|-----|-----|

| P1 | 0 | 3 |

| P2 | 1 | 5 |

| P3 | 2 | 1 |

| P4 | 3 | 4 |

Calculate the average turnaround time

2) According to SJF (non-preemptive case)

Process	Arrival Time	Burst Time	Waiting Time	TAT
P <sub>1</sub>	0	3	0	3
P <sub>2</sub>	1	5	7	12
P <sub>3</sub>	2	1	1	2
P <sub>4</sub>	3	4	1	5

Gantt chart -

P<sub>1</sub>      P<sub>3</sub>      P<sub>4</sub>      P<sub>2</sub>

0      3      4      8      13

$$\therefore \text{Average TAT} = \frac{22}{4}$$
$$= 5.5$$

3. Consider the following processes with arrival times, burst times, and priorities (lower number

indicates higher priority):

| Process | Arrival Time | Burst Time | Priority |

|-----|-----|-----|-----|

| P1 | 0 | 6 | 3 |

| P2 | 1 | 4 | 1 |

| P3 | 2 | 7 | 4 |

| P4 | 3 | 2 | 2 |

Calculate the average waiting time using Priority Scheduling.

3) Using Priority scheduling Algorithm :

i) Non-Preemptive case -

Process	Arrival Time	Burst Time	Priority	Waiting Time $P_i$	Preemptive waiting time
P <sub>1</sub>	0	6	3	0	6
P <sub>2</sub>	1	4	1	5	0
P <sub>3</sub>	2	7	4	10	2
P <sub>4</sub>	3	2	2	7	10

Gantt chart -

$$\therefore \text{Average waiting time} = \frac{22}{4} = 5.5$$

ii) Preemptive Case -

Gantt chart -

$$\therefore \text{Average waiting time} = \frac{18}{4} = 4.5$$

4. Consider the following processes with arrival times and burst times, and the time quantum for

Round Robin scheduling is 2 units:

| Process | Arrival Time | Burst Time |

|-----|-----|-----|

| P1 | 0 | 4 |

| P2 | 1 | 5 |

| P3 | 2 | 2 |

| P4 | 3 | 3 |

Calculate the average turnaround time using Round Robin scheduling.

4) According to Round Robin Algorithm-

Q, quantum = 2 us

Process	Arrival time	Burst Time	waiting time	TAT
P <sub>1</sub>	0	4	6	10
P <sub>2</sub>	1	5	8	15
P <sub>3</sub>	2	2	2	4
P <sub>4</sub>	3	3	7	10

Gantt chart -

P<sub>1</sub>    P<sub>2</sub>    P<sub>3</sub>    P<sub>4</sub>    P<sub>1</sub>    P<sub>2</sub>    P<sub>4</sub>    P<sub>2</sub>  
 0    2    4    6    8    10    12    14    16

$$\text{Average TAT} = \frac{40}{4}$$

$$= 10$$

**5. Consider a program that uses the fork() system call to create a child process. Initially, the parent**

**process has a variable x with a value of 5. After forking, both the parent and child processes**

**increment the value of x by 1.**

**What will be the final values of x in the parent and child processes after the fork() call?round time using Shortest Job First (SJF) scheduling.**

**Answer :**

When a process calls fork(), it creates a child process that is a duplicate of the parent. Both processes have separate memory spaces, meaning any changes to variables in one process do not affect the other.

In this case:

- Initially,  $x = 5$  in the parent process.
- After fork(), both parent and child have separate copies of  $x=5$ .
- Both processes increment  $x$  by 1 independently.

Final values:

Parent process:  $x = 6$

Child process:  $x = 6$
